Skill Sheet

Glucagon Administration – EMT-AEMT

Skill	Pass	Needs Improvement (Please comment)
1. Takes Body Substance Isolation precautions		
2. Assembles and prepares the needed equipment. The medication should already be drawn up according to proper reconstitution procedures		
3. Assures medication is indicated for patient		
4. Determines if patient has taken any prescribed dose(s)		
5. Assures proper dosage for patient (adults weighing >55 lbs [25kg] administer 1 mg, pediatrics weighing less than 55 lbs [25kg] administer .5 mg)		
6. Contacts medical direction for authorization, if administration is not in standing orders		
7. Selects appropriate intramuscular site and prepares site with alcohol prep		
8. Stretches skin taut over injection site with non-dominant hand. Inserts needle just into skin at 90° angle		
9. Pulls back on plunger to aspirate for blood, starts over if blood appears		
10. Slowly inject the medication		
11. Removes the needle and disposes needle in proper sharps container		
12. Uses gauze for hemorrhage control if needed at site. Places bandage over the site		
13. Reassesses patient for desired effect and possible side effects		
Total Steps Passed		

Critical Criteria (Automatic Fail)

- _____ Did not take or verbalize BSI precautions
- _____ Did not assure medication was indicated for patient
- _____ Gave improper dose
- _____ Failed to contact medical control, or verify if order is in written orders
- _____ Failed to choose a proper site and cleanse it
- _____ Failed to aspirate for blood
- _____ Was not able to administer medication
- _____ Did not reassess for desired effect

Final Score (circle one)	Pass	Fail
